VERVE™ PREMIER COLLECTION

discover the difference

TREAT YOUR PATIENTS WITH VERVE!

- Superb aesthetics
- Strength and reliability
- Proven and trusted performance

Verve Ceramic brackets offer the same great benefits of the metal version in precision, strength and reliability. Verve Ceramic are almost invisible as they have the highest translucency blending naturally with all tooth shades and highly resistant to staining and discoloration. Verve Ceramic are manufactured from the highest quality polycrystalline alumina providing unmatched strength and durability to minimise bracket fracture. The proven mechanical lock base design ensures optimal bond strength whilst also making debonding predictable and stress free. Clinically proven, Verve Ceramic will deliver exactly what you and your patients are looking for in an aesthetic bracket system.

SEE BACK PAGE FOR PATIENT KITS AND ORDERING INFO

Smooth with rounded edges for improved patient comfort

Removable colour coding for easy identification

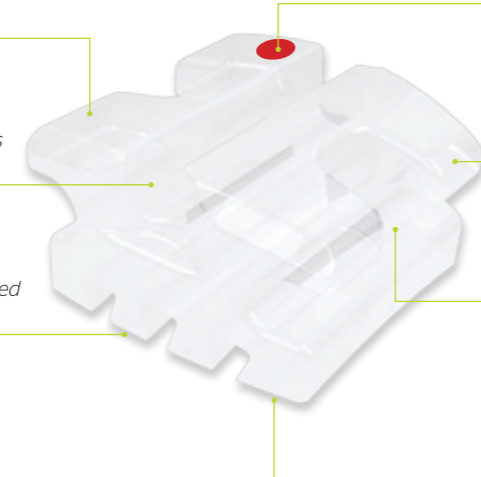

Smooth archwire slot design improves sliding mechanics

Generous under tie wing area helps ligation

Compound contoured base for the best fit

Low profile design to minimise occlusal interference for added comfort

Mechanical lock base with dove tail grooves ensures reliable bonding and predictable debonding

Experience everything Verve has to offer: Precision, Strength and Reliability

Bi-directional canine hook is rounded and smooth for patient comfort

80 Gauge mesh base for maximum bond strength

Permanent ID by quadrant with removable colour coding

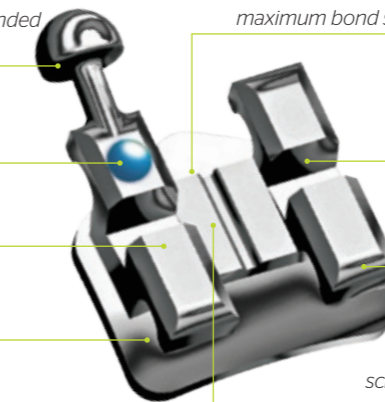

Super polished low friction slot for great sliding mechanics

Smooth tie wings for enhanced patient comfort

Chamfered tie wings for ease of ligature placement

Highest grade stainless steel for maximum strength

Highly visible vertical scribe line for quick and precise placement

- CNC milled slot for greater precision and more efficient treatment
- Offset and extended base options to suit your specific requirements
- Compound contouring facilitates placement
- Low profile minimises occlusal interferences
- Palladium alloy brazing for the strongest bracket-to-base bond
- Mushroom shaped hook secures chains and ligatures in place without slipping
- Torque in base for level slot alignment

BUCCAL TUBES

To complement Verve brackets, Verve buccal tubes are designed to offer you the same great benefits in terms of guaranteed ease of use, treatment efficiency and predic table results.

Verve buccal tubes are precision manufactured for strength and reliability, with a low profile to deliver maximum comfort for your patients.

Rounded ball hook for improved patient comfort

Permanent code markings for easy identification

Low profile MIM design

Flat buccal surface with special cut out aids handling and positioning

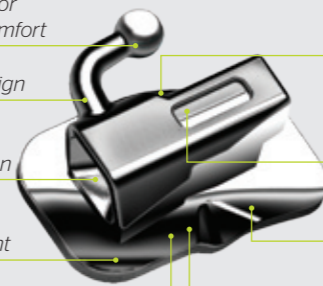

Funnelled entry for easy wire insertion

Indented mesh pad for precise placement

80 gauge mesh contoured base for reliable bonding

Torque in the base

Optimum size pad ensures maximum retention

Everything you desire in a bracket

- Guaranteed Ease of Use
- Treatment Efficiency
- Predictable Results

Verve is precision engineered to a design that fulfils all your expectations of a high quality bracket. Created to provide great strength and reliability, with features that will allow you to treat with confidence. Now you can really enjoy using Verve and your patients will love them!

Precision Engineered

Verve has an advanced design that combines Metal Injection Moulding (MIM) and Computer Numerator Controlled Milling (CNC). MIM allows for a smaller and more detailed design which has greater strength whilst the CNC milling provides the most accurate of slots for advanced sliding mechanics.

Ease of Use

Verve incorporates many features to help in bracket placement, bonding and ligation of elastomerics; the compound contoured Super Grip base means there is no need to worry about accidental debonds. Bracket options include bicuspid with an offset base making it easier to bond partially erupted teeth while still providing straight wire mechanics. The additional option of an extended bonding pad on pre-molars means the brackets are easier to position as it allows the bracket slot and more of the base to be visible during bonding. Bond strength is also increased with these bases. Bracket kits are conveniently supplied pre-loaded onto bracket orientation cards ready for bonding to save you both time and money.

Treatment Results

Verve provides you with efficient and predictable treatment case after case, with true torque in the base delivering exact bracket prescription values, accurate slots and in/out dimensions with fewer wire bends. Your patients will appreciate the comfort, look and the results too!
