

# ALIGNER ACCESSORIES

*Get the best results with your aligner treatments with these essential products!*

T: 0117 975 5533  
E: [info@tocdental.com](mailto:info@tocdental.com)  
W: [tocdental.com](http://tocdental.com)

Now you can save valuable time and get great results from your aligner treatments. With these Avanti pliers it's easy to fine tune your aligners, saving both time and money.

### Tear Drop Plier

When elastics are required on an aligner use this plier to create a cut-out of the correct shape to hold them. Elastics are held securely and placing them is made much easier for the patient.

#### CODE

SA-100-01

### Vertical Plier

Use on a particular tooth to produce an over correction which helps overcome one of the problems of aligners, that of correcting rotations. Makes a vertical indentation at the mesial/distal, facial or lingual aspect of a tooth.

#### CODE

SA-100-02

### Horizontal Plier

Designed to create individual root torque by making a horizontal indentation. Plus, use to increase retention of aligners and retainers by placing indent under a bonded attachment or tooth's undercut.

#### CODE

SA-100-03

### Hole Punch Plier

For creating space in aligners for bonded buttons or hooks that are to be placed on tooth surface. Use on gingival edge of aligner and a half circle 6mm in diameter is formed. Also use to quickly and easily remove excess plastic to stop tissue impingement by aligner.

#### CODE

SA-100-04

### Retention Plier

When increased retention is required in an aligner or retainer use this plier to create a circular indentation (dimple) at the gingival margin. Also helpful in making difficult tooth movements by increasing pressure on a specific tooth.

#### CODE

SA-100-05

### Avanti Aligner Adjustment Kit

Sterilisation cassette with all five pliers and small curved scissors. All items available individually.

#### CODE

SA-100-10

### Complete Avanti Plier Set

Presentation case containing all five instruments from the Avanti range.

#### CODE

SA-100-06

# Intensiv IPR Kit

Fast, safe and precise IPR

**WHEN ONLY THE BEST WILL DO**

- 20,000 oscillations
- 40,000 rpm
- 1.8mm reciprocal movement
- 2 year warranty

IS-200-05 - Ortho Strips Tray with 2 openers 08µm, 3 Central Medium 40µm, 1 Central Polishing 15µm

Swingle Contra-angle with or without light

A simple toggle switch on the head to select free moving or fixed position of strips

Fixed file position - 12 positions for exact positioning of the strip to open the contact point and for enamel reduction

Free moving file for contouring, finishing and polishing

*"This kit, for me, has provided a safe way to carry out IPR. It is a very efficient tool and I would highly recommend it."*

**Dr. Kunle Aluko, Specialist Orthodontist**

*"The Swingle has been a fantastic addition to my orthodontic tool kit - I'm not sure how I lived without it! I can now carry out IPR so much quicker and more effectively mechanically than I could by hand."*

*The Swingle has brought me to realise I wasn't carrying out sufficient IPR by hand - likely due to the huge amount of time it would take to do anything over 0.2mm."*

**Dr Sian Walley, Invisalign user**

- Precise, calibrated reduction of enamel with a step by step protocol, ensuring maximum safety
- Contouring, finishing and final polishing
- Rapid and controlled system - achieves 20 minutes of manual IPR in approx 60 seconds
- Contra-angle handpiece with integrated water spray

Contact us for a demo and training to help you get the most out of your Swingle or to book on one of our IPR Workshops

PRODUCT	CODE
TOC Intensiv IPR Kit (Swingle without light)	IS-100-99

**1. Opening** of the interdental space, Intensiv Ortho-Strips System, Opener 08µm.

**2. Controlled reduction** and enamel contouring with the Intensiv Ortho-Strips System, Central, Medium 40µm.

**3. Verifying** the created space with the Intensiv IPR-Distance Control.

**4. Polishing** of enamel with Intensiv Ortho-Strips System, Central, Polishing 15µm.

# Ortho-Strips System

## Central - Double Sided Strips

- Oscillating strips with diamond coating in the central area
- Simplified insertion into the interdental contact points in the central area
- Prevention of cervical steps
- Conservation of the original morphology of the tooth equator
- Prevention of dentine hypersensitivity
- Reusable

STRIPS (Pk 3)	CODE

Long Flame, High speed, 8mm head	IB-310-12
Football, High speed, 4.4mm head	IB-310-23

# Tungsten Carbide Debonding Burs

Quantum burs are designed, manufactured and finished for optimum strength, performance and durability offering efficient debonding and adhesive removal. They are brazed at the base of the neck as opposed to the base of the head as found in many competitor products. The stainless steel shanks allows for multiple autoclave cycles without the risk of corrosion and the convenient blister packaging keeps burs safe and well protected until needed.

# Ortho FlexTech Retainer Wire

Ortho-FlexTech provides secure and stable long term passive retention. The patented interlocking chain design forms naturally to the lingual curvature making it easy to fit in the chair. The chain lays flat against the teeth offering improved patient comfort and lasting aesthetics due to its 14K karat gold composition.

An etched version is available for improved adhesion whilst the stainless steel option offers increased tensile and torsional strength.

## Aligner Hook

NEW

- Small profile aligner button with hook designed by British Orthodontist Zaid Esmail
- Smaller profile allows plenty of room for attachment placement for optimal control
- 'Tail' added to button to allow easy placement and removal of the elastic

PRODUCT	CODE
Aligner Hook (Pk 10)	JH-500-00

# Precision Aligner Buttons®

Try the first bondable buttons created for clear aligners

Orthodontists routinely use rubber bands with clear aligners to correct malocclusions. However, these elastics are being attached with components created for braces - not aligners. These auxiliaries too often debond or cause irritation because they have a small surface area and are intended for the centre of the clinical crown.

Here we have a new type of button that fits within the aligner cut out windows, like a puzzle piece.

Whichever aligner system you use, this patented design gives you a reliable bond due to its large surface area and contour.

Now you can reduce your unnecessary emergency patient visits with Precision Aligner Buttons.

**Reduce emergency visits & save chair time!**

The NEW Mini Metal version of Precision Aligner Buttons is specifically created for 2nd molars or partially erupted 1st molars. With a 15% smaller base pad and the precise base shape for superb retention, it provides an excellent solution for orthodontic cases requiring small buttons.

- Base shaped to fit precisely within aligner cut outs for canines and premolars
- Maximum retention through optimal surface area and unique bonding base
- Anatomically correct to match the curvature of molar's cervical third
- Positioning dimple on button face for an explorer or scaler

**NEW Mini version**
